100 / 100
Grade A+

Reachability		100
Comprehension		100
Structure		100
Actionability		100
Agent Contract		100

IN PLAIN ENGLISH

An AI assistant can find axray.online, read it, and act on what it finds.

Can an AI assistant open this page at all?

YES Yes. When an assistant goes to look, the page answers it.
This is the thing most sites get wrong first, and this one does not.

Will it describe this business correctly?

YES Yes. The page states plainly what it is, in words the assistant can read.
What an assistant says about this page comes from the page itself.

Can it quote the facts - prices, contact details, opening hours?

YES Yes. The key facts are published in a form it can lift word for word.
Asked what this costs or how to get in touch, an assistant answers with the real number.

Can it take the next step - follow a link, use a form, get in touch?

YES Yes. Links lead somewhere, forms are labelled, and there is a clear way to make contact.
An assistant can carry somebody from an answer all the way to you.

Have the AI companies been told your rules?

YES Yes. The site states which AI systems may use it and on what terms.
The terms are yours, in writing, where the crawlers look for them.

This page is already agent-ready

Every question above is already answered "yes". The work now is keeping it that way: run the scan in your deploy pipeline so a change that breaks it fails the build rather than being discovered months later.

Nothing is failing

No check on this page is failing or warning. The passing list below is the whole report.

53 PASSING

What this page already gets right

- PASS Page responds to a plain HTTP request
- PASS No bot wall in front of the content
- PASS Content exists without running JavaScript
- PASS robots.txt is present and parseable
- PASS Answer engines are allowed to crawl
- PASS User-triggered fetchers are allowed
- PASS Classic search crawlers are allowed
- PASS No directive suppressing AI use of this page
- PASS Short redirect chain
- PASS Responds fast enough for an agent budget
- PASS HTML payload stays inside an agent context budget
- PASS Declares a correct content type
- PASS Has a descriptive <title>
- PASS Has a meta description
- PASS The page describes itself consistently
- PASS Exactly one <h1> naming the page
- PASS Headings form a sane outline
- PASS Enough substance to be worth citing
- PASS Answers questions in a form that can be quoted
- PASS Signal-to-markup ratio
- PASS Declares a document language
- PASS Images carry alt text
- PASS Main content is marked as such
- PASS Uses semantic elements, not div soup
- PASS URL describes the content
- PASS Ships structured data
- PASS Structured data parses cleanly
- PASS Structured data describes the right thing
- PASS Open Graph card is complete
- PASS Declares a canonical URL
- PASS Publishes a sitemap
- PASS Publishes a feed of its content
- PASS Declares its language alternates
- PASS Prices are machine-readable
- PASS Declares a link preview card

- PASS Navigation uses real links
- PASS Link text describes the destination
- PASS Links onward into the site
- PASS Form fields are labelled
- PASS Form fields have stable names
- PASS Fields declare autocomplete tokens
- PASS Controls are real buttons
- PASS Reachable by a human, discoverably
- PASS Site search is machine-usable
- PASS Programmatic surface is discoverable
- PASS Publishes an llms.txt
- PASS llms.txt is actually useful
- PASS States an explicit AI policy
- PASS Exposes an agent-callable manifest
- PASS Identity is machine-verifiable
- PASS Says when the content changed
- PASS Declares content licensing
- PASS Publishes security.txt

4 checks did not apply to this page and were excluded from the score entirely: Real agent user-agents are served normally; Provides a no-JavaScript fallback; Declares its place in the site; Inline microdata annotations.

Who can actually reach this page

Resolved from robots.txt for this exact path, one crawler at a time. Blocking a training crawler is a legitimate business decision. Blocking an answer engine removes you from the results that would have linked to you.

Answer engine

Indexes you so an assistant can cite and link you. Blocking it removes you from AI answers.

OAI-SearchBot	OpenAI	Allowed
Claude-SearchBot	Anthropic	Allowed
PerplexityBot	Perplexity	Allowed
Amazonbot	Amazon	Allowed
DuckAssistBot	DuckDuckGo	Allowed

User-triggered

Fetches your page because a human asked an assistant to open it right now. Blocking it breaks a live request.

ChatGPT-User	OpenAI	Allowed
Claude-User	Anthropic	Allowed
Perplexity-User	Perplexity	Allowed

Classic search

Traditional search indexing, increasingly the substrate AI answers are built on.

Googlebot	Google	Allowed
Bingbot	Microsoft	Allowed

Training crawler

Collects content for model training. Blocking it is a legitimate business choice with no traffic cost.

GPTBot	OpenAI	Allowed
ClaudeBot	Anthropic	Allowed
Google-Extended	Google	Allowed
Applebot-Extended	Apple	Allowed
meta-externalagent	Meta	Allowed
CCBot	Common Crawl	Allowed

EVIDENCE

What we actually received

Every number in this report comes from one plain HTTP response. No browser, no JavaScript, no retries.

Final URL	https://axray.online/
HTTP status	200
Response time	151 ms
HTML size	38 KB
Inline script	4 KB (12% of payload)
Readable words	1510
Text-to-markup	22.6%
Title	AXRAY - See what AI can actually read on your website.

Language	en
Canonical	https://axray.online/
Detected stack	(none detected)
robots.txt	served
sitemap.xml	40 URLs
llms.txt	9 sections, 31 links
